Specifications

RAK19003 is a **WisBlock Base** board that connects **WisBlock Core** and **WisBlock Modules**. It provides the power supply and interconnection to the modules attached to it. It has one slot reserved for the WisBlock Core module and two Slot C-D for WisBlock Modules. The WisBlock Core is attached on the top side, and the WisBlock Modules are attached to the bottom side of the RAK19003 WisBlock Base board. Slot D holds modules up to 23 mm in size, while Slot C supports 10 mm WisBlock Modules. Also, there are two **2.54 mm pitch headers** for extension interface with **BOOT**, **I2C**, and **UART** pins.

For convenience, there is a Type-C USB connector that is connected directly to WisBlock Core MCU's USB port (if supported) or to a USB-UART converter depending on the WisBlock Core. It can be used for uploading firmware or serial communication. The USB-C connector is also used as a battery charging port.

WisBlock Modules are connected to the RAK19003 WisBlock Base board via **high-speed board to board connectors**. They provide secure and reliable interconnection to ensure the signal integrity of each data bus. A set of screws are used for fixing the modules, which makes it reliable even in an environment with lots of vibrations.

Using **RAK19003** as your WisBlock Base board, you can make your project compact, which is ideal in small enclosures. You can also use a [RAK19005 WisBlock Sensor Extension Cable](#)  to position WisBlock Modules apart from the WisBlock Base board or in any part of your case.
